

Project 33

Global Matrimonial Services – Online Matrimonial Management System

About the Client

Established in 2015, Global Matrimonial Services was developed after extensive research in to the state of India's relationship services. It was clear to us that there was a need in India for a quality matrimonial service that was available to all Indians, regardless of their wealth or background.

The Global Matrimonial Services team is located within India as well as abroad. With backgrounds in astrology, psychology and counselling, our team has the experience required to create lasting relationships.

Our award winning services are both the most advanced and best value for money in all of India, and is available to those living at home as well as NRIs living abroad. Our platform is designed to be simple and easy to use, so whether it's creating a profile, chatting with prospective life partners or asking for advice in our relationship columns, you will find everything a breeze.

Our mission is to provide people with a satisfying experience by offering a service that is safe and easy for everyone in all age groups to use to find their life-partner.

Our vision is to help make the experience of finding a life partner as enjoyable as living the journey with them.

We know your time is precious, that is why we have created a system where you can select who is eligible to contact you. This saves you from wasting time reviewing incompatible profiles.

Our unique match making system will ensure you meet only the most suitable candidates. This system is exclusive to Global Matrimonial Services and is not available on other matrimonial sites.

As Global Matrimonial Services is the most value for money service in Australia, we receive more new profiles than other sites. This increases your odds of finding your life partner.

Project Brief:

Objectives

The Proposed Project is named as “WEB BASED MATRIMONIAL SYSTEM” where boys and girls registered themselves for to search their companions. Due to computerized and it is available online, people can register as and when they require and they can register wherever they are, so it provides lot of flexibility for people to search their companions easily.

Today, the marriage alliance arranged by known people and that are conducted manually and the amount of time required is very huge. Only they can help to know only few alliances.

What is Matrimonial Web System?

The main objective of Matrimonial Web System is to provide Grooms and Brides with excellent matchmaking experience by exploring the opportunities and resources to meet true potential partner. Keeping our objective in mind, we have created a world-renowned online matchmaking services that will touch the souls of millions of people all over the globe.

The purposes of the Matrimonial Web System are:

- The main purpose of this system is to facilitate matchmaking business by applying the information in the field.
- It helps the user by providing profiles of perspective “Bride” or “Groom” and other information regarding them online.
- User can get information regarding their dream life partner at his/her home at his/her convenience.
- This system also provides a search utility which helps those users who have a certain criteria of qualities in mind to make online matrimonial easier.

- Since internet is a pivot for modern business, our project which is based on internet paves a path for modernization in trade.

Matrimonial Web System will allow a new user to register and after successfully registration user can get email confirmation, after completing registration users profile will be visible to other users.

OVERALL DESCRIPTION OF THE PROPOSED SYSTEM

The main objective of Matrimonial Web System is to provide Grooms and Brides with excellent matchmaking experience by exploring the opportunities and resources to meet true potential partner. Keeping our objective in mind, we have created a world renowned online matchmaking services that will touch the souls of millions of people all over the globe.

- The main purpose of this system is to facilitate matchmaking business by applying the information in the field.
- It helps the user by providing profiles of perspective “Bride” or “Groom” and other information regarding them online.
- User can get information regarding their dream life partner at his/her home at his/her convenience.
- This system also provides a search utility which helps those users who have a certain criteria of qualities in mind to make online matrimonial easier.
- Since internet is a pivot for modern business, our project which is based on internet paves a path for modernization in trade.

Matrimonial Web System will allow a new user to register and after successfully registration user can get email confirmation, after completing registration users profile will be visible to other users.

Matrimonial website which will provide platform to a lot of Bride/Groom for finding perfect match. There are different sectors like Registration, Partner, Search, etc. So the Bride/Groom can get their interest for find their partner. Bride/Groom can directly search Partner according to their required criteria. The

Bride/Groom can use match By Email functionality so he/she can get directly E-mail alert for the match which fulfill their required criteria.

System Features

In the life of the software development, problem analysis provides a base for design and development phase. The problem is analyzed so that sufficient matter is provided to design a new system. Large problems are sub-divided into smaller once to make them understandable and easy for finding solutions. Same in this project all the task are sub-divided and categorized.

System Modules:

- User Registration and Authentication Module
- Matrimonial Profile Management Module
- Identity and Profile Verification Module
- Partner Preference Management Module
- Matchmaking and Recommendation Module
- Search and Filtering Module
- Interest and Connection Management Module
- Secure Communication Module
- Subscription and Payment Module
- Privacy and Safety Management Module
- Complaint and Moderation Module
- Notification Management Module
- Success Story and Feedback Module
- Administration and Reporting Module

Functional Requirements

Functional requirements are product features or functions that developers must implement to enable users to accomplish their tasks. So, it's important to make them clear for the stakeholders. Generally, functional requirements describe system behavior under specific conditions. The developers of this system must enhance the performance and efficiency of the system by adding 15 to 20 more functional requirements. Students need to do their own research to find how they can improve the system and which FRs need to be added. The group must need a prior approval from the stakeholders/project supervisor before finalizing these Functional Requirements. These enhanced FRs must be reflected separately in Final SRS Report after the approval.

Module 1: User Registration and Authentication

FR01: User Registration

The system should allow adult users to register by providing their name, email address, phone number, date of birth and password.

FR02: Age Validation

The system should verify that users meet the minimum legal age requirement before allowing account registration.

FR03: Email Verification

The system should send a verification link or code to confirm the user's email address.

FR04: Phone Number Verification

The system should support phone-number verification using a one-time verification code.

FR05: User Login

The system should allow verified users to log in using their registered email address or phone number and password.

FR06: Password Recovery

The system should allow users to reset forgotten passwords through a verified email address or phone number.

FR07: Multi-Factor Authentication

The system should support optional multi-factor authentication for registered users and mandatory multi-factor authentication for administrators.

FR08: User Logout

The system should allow authenticated users to securely log out of their accounts.

Module 2: Matrimonial Profile Management

FR09: Profile Creation

The system should allow users to create a matrimonial profile after account verification.

FR10: Personal Information Management

Users should be able to enter and update permitted personal details such as age, occupation, education, location, languages and marital status.

FR11: Family Information Management

Users should be able to provide optional family-background information.

FR12: Lifestyle Information Management

Users should be able to provide lifestyle information such as dietary preferences, smoking status, interests and hobbies.

FR13: Profile Photograph Upload

The system should allow users to upload profile photographs.

FR14: Photograph Privacy

Users should be able to control whether their photographs are public, hidden or visible only to approved connections.

FR15: Profile Completion Indicator

The system should display the percentage of profile information completed.

FR16: Profile Activation and Deactivation

Users should be able to activate, temporarily hide or deactivate their matrimonial profiles.

Module 3: Identity and Profile Verification

FR17: Identity Document Submission

The system should allow users to submit approved identity documents for verification.

FR18: Verification Status Tracking

Users should be able to view whether their profile verification is pending, approved, rejected or requires further information.

FR19: Administrator Verification

Authorised administrators should be able to review submitted verification information.

FR20: Verified Profile Badge

The system should display a verification badge on approved profiles.

FR21: Employment Verification

The system should allow users to submit employment information for optional verification.

FR22: Education Verification

The system should allow users to submit education qualifications for optional verification.

FR23: Verification Rejection

Administrators should be able to reject verification requests and provide a reason.

FR24: Verification History

The system should retain a history of profile-verification decisions.

Module 4: Partner Preference Management

FR25: Partner Preference Creation

The system should allow users to define preferred partner characteristics.

FR26: Age Range Preference

Users should be able to specify a preferred age range.

FR27: Location Preference

Users should be able to specify preferred countries, states, cities or regions.

FR28: Education and Occupation Preference

Users should be able to specify preferred education levels and occupations.

FR29: Lifestyle Preference

Users should be able to specify preferred lifestyle characteristics.

FR30: Preference Priority Assignment

Users should be able to identify preferences as essential, preferred or optional.

FR31: Preference Updating

Users should be able to update their partner preferences at any time.

FR32: Preference Visibility

Users should be able to control whether selected partner preferences are visible to other users.

Module 5: Matchmaking and Recommendation**FR33: Match Generation**

The system should generate potential matches based on profile information and partner preferences.

FR34: Compatibility Score Calculation

The system should calculate a compatibility score for recommended profiles.

FR35: Match Explanation

The system should display the main factors contributing to each compatibility score.

FR36: Daily Match Recommendations

The system should display a set of recommended matches to eligible users.

FR37: Match Refresh

The system should update recommendations when profile information or preferences change.

FR38: Excluded Profile Management

The system should exclude blocked, rejected, inactive or incompatible profiles from recommendations.

FR39: Saved Match Management

Users should be able to save preferred profiles for later review.

FR40: Recommendation Feedback

Users should be able to indicate whether a recommendation was relevant or unsuitable.

Module 6: Search and Filtering**FR41: Basic Profile Search**

The system should allow users to search active profiles using basic criteria.

FR42: Advanced Profile Search

The system should allow users to search using multiple profile and preference criteria.

FR43: Search Filtering

Users should be able to filter profiles by age, location, education, occupation, verification status and other permitted attributes.

FR44: Search Sorting

Users should be able to sort results by relevance, profile activity, compatibility or registration date.

FR45: Search Result Pagination

The system should divide large search results into manageable pages.

FR46: Saved Search

Users should be able to save commonly used search criteria.

FR47: Search History

Users should be able to view and clear their recent searches.

FR48: Profile Viewing

The system should allow users to view profile information according to the profile owner's privacy settings.

Module 7: Interest and Connection Management

FR49: Interest Expression

Users should be able to send an expression of interest to another eligible user.

FR50: Interest Acceptance

Users should be able to accept received interests.

FR51: Interest Rejection

Users should be able to decline received interests.

FR52: Interest Withdrawal

Users should be able to withdraw pending interests.

FR53: Mutual Connection Creation

The system should create a connection when an interest is accepted.

FR54: Connection List

Users should be able to view their current connections.

FR55: Connection Removal

Users should be able to remove an existing connection.

FR56: Interest History

Users should be able to view sent, received, accepted, declined and withdrawn interests.

Module 8: Secure Communication

FR57: Connection Messaging

The system should allow mutually connected users to exchange messages.

FR58: Message Notification

The system should notify users when they receive a new message.

FR59: Message History

Users should be able to view previous conversations with active connections.

FR60: Message Blocking

Users should be able to block messages from selected users.

FR61: Message Reporting

Users should be able to report inappropriate or suspicious messages.

FR62: Contact Detail Sharing

The system should allow users to choose whether and when to share contact details.

FR63: Conversation Deletion

Users should be able to remove conversations from their own message view.

FR64: Communication Restriction

The system should prevent suspended, blocked or unverified users from sending messages where required.

Module 9: Subscription and Payment

FR65: Membership Plan Display

The system should display available free and paid membership plans.

FR66: Subscription Purchase

Users should be able to purchase a selected membership plan.

FR67: Payment Recording

The system should record payment amount, date, method and transaction status.

FR68: Subscription Activation

The system should activate membership benefits after successful payment confirmation.

FR69: Subscription Renewal

Users should be able to renew their membership plans.

FR70: Subscription Expiry Notification

The system should notify users before their membership expires.

FR71: Payment Receipt Generation

The system should generate a receipt for successful payments.

FR72: Refund Request

Users should be able to submit refund requests according to platform policy.

Module 10: Privacy and Safety Management

FR73: Profile Visibility Control

Users should be able to control who can view their matrimonial profiles.

FR74: Photograph Access Request

Users should be able to request access to private profile photographs.

FR75: Contact Information Privacy

The system should hide personal contact details unless the user chooses to share them.

FR76: Profile Blocking

Users should be able to block selected profiles.

FR77: Profile Reporting

Users should be able to report suspicious, misleading or inappropriate profiles.

FR78: Account Deletion Request

Users should be able to request permanent account deletion.

FR79: Data Download Request

Users should be able to request a copy of their stored profile and account information.

FR80: Consent Management

The system should record user consent for profile publication and personal-data processing.

Module 11: Complaint and Moderation

FR81: Complaint Submission

Users should be able to submit complaints against profiles, messages or platform activities.

FR82: Evidence Upload

Users should be able to attach screenshots or documents to complaints.

FR83: Complaint Reference Generation

The system should generate a unique reference number for each complaint.

FR84: Complaint Status Tracking

Users should be able to track whether a complaint is submitted, under review, resolved or closed.

FR85: Moderator Assignment

Administrators should be able to assign complaints to authorised moderators.

FR86: Moderation Action

Moderators should be able to warn, restrict, suspend or deactivate accounts.

FR87: Appeal Submission

Users should be able to appeal selected moderation decisions.

FR88: Moderation History

The system should record all moderation decisions and account actions.

Module 12: Notification Management

FR89: Interest Notification

The system should notify users when they receive an expression of interest.

FR90: Connection Notification

The system should notify users when an interest is accepted.

FR91: Match Notification

The system should notify users when new recommended matches are available.

FR92: Verification Notification

The system should notify users when their verification status changes.

FR93: Complaint Notification

The system should notify users when their complaint status changes.

FR94: Notification Preference Management

Users should be able to select email, SMS or portal notification preferences.

FR95: Notification History

Users should be able to view previous notifications.

FR96: Notification Unsubscription

Users should be able to unsubscribe from optional notifications.

Module 13: Success Story and Feedback**FR97: Success Story Submission**

Users should be able to submit matrimonial success stories.

FR98: Success Story Approval

Administrators should be able to review and approve success stories before publication.

FR99: Testimonial Management

Users should be able to submit feedback and testimonials about the platform.

FR100: Service Rating

Users should be able to rate their experience with the platform.

FR101: Feedback Review

Administrators should be able to review user feedback.

FR102: Success Story Publication

The system should publish approved success stories without disclosing unauthorised personal information.

Module 14: Administration and Reporting

FR103: User Account Management

Administrators should be able to search, view, suspend, reactivate and deactivate user accounts.

FR104: User Role Management

Administrators should be able to assign and update authorised user roles.

FR105: Profile Moderation

Administrators should be able to review and remove inappropriate profile content.

FR106: Membership Plan Management

Administrators should be able to create, update, activate and deactivate membership plans.

FR107: Payment Report Generation

The system should generate reports for payments, subscriptions, renewals and refunds.

FR108: User Activity Reporting

The system should generate reports on registrations, active profiles, matches and connections.

FR109: Complaint Reporting

The system should generate reports on complaints, reported profiles and moderation outcomes.

FR110: Match Analytics

The system should generate aggregated reports on recommendations, interests and successful connections.

FR111: Content Management

Administrators should be able to manage help pages, safety guidance, privacy notices and platform policies.

FR112: Audit Logging

The system should record important actions, including logins, profile updates, verification decisions, payments and moderation activities.

Ethical Requirements

The system should:

- Restrict registration to adults
- Obtain consent before displaying personal information
- Allow users to control profile visibility
- Avoid exposing phone numbers and email addresses by default
- Provide blocking and reporting functions
- Avoid discriminatory or harmful automated recommendations
- Explain that compatibility scores do not guarantee successful relationships
- Protect identity documents and private photographs
- Allow users to deactivate or delete their accounts
- Prevent administrators from accessing user passwords

Non-Functional Requirements (NFRs)

Performance

1. The system should load all pages within 3 seconds under normal network conditions.
2. The system should support at least 1000 concurrent users.
3. The database should respond to queries in less than 2 seconds for up to 100,000 records.

Reliability

4. The system should maintain 99% uptime excluding scheduled maintenance.
5. The system should provide automatic backup of user data daily.
6. In case of system failure, the database should restore from the latest backup without data loss exceeding 24 hours.

Security

7. The system should use HTTPS (SSL/TLS) for secure data transmission.
8. Passwords and sensitive information should be encrypted and never stored in plaintext.
9. The system should prevent SQL Injection, XSS, and CSRF attacks.
10. User sessions should automatically expire after inactivity.

Usability

11. The interface should be intuitive and mobile-responsive.
12. Form validations should display clear error messages.
13. The design should use consistent layouts and colour themes.
14. The system should support both desktop and mobile browsers.

Maintainability

15. The system should follow modular PHP code structure with MVC pattern.
16. All functions should be documented for future maintenance.
17. The database schema should be normalised up to 3NF for scalability.

Scalability

18. The system should support easy migration from single-server MySQL to clustered database architecture.
19. The design should allow integration with REST APIs for mobile app extension.

Availability

20. The system should be available 24 × 7 with scheduled downtime notifications.
21. The system should automatically recover from unexpected server shutdowns using error logs.

Data Integrity

22.The system should ensure consistency between linked tables (foreign-key constraints).

23.The system should validate all input before committing to the database.

Compliance

24.The system should comply with GDPR-like data privacy standards, allowing users to delete their profiles permanently.

25.All personal information should be used only for matchmaking purposes.

Hardware Requirement: Should be recommended by the developers.

Software Requirement: Should be recommended by the developers.
